ENGINEERING WITH A PRODUCT MINDSET

Kaleab Taye

Software Engineer / Senior Full-stack Developer

Addis Ababa, Ethiopia | kaleabtaye@gmail.com

kaleab-taye.dev | LinkedIn | GitHub | Upwork

I turn product ideas into useful software, connecting thoughtful interfaces with dependable backend systems and the infrastructure that runs them. My work spans gaming, commerce, business platforms and automation, with responsibilities across hands-on development, design and project leadership.

EXPERIENCE & LEADERSHIP

GUGS Games & Luxodd Games | Software engineering

Current collaborations

Building with GUGS Games and Luxodd Games across full-stack software and interactive gaming experiences. Work connects product interfaces, backend systems and the software behind connected games and arcade experiences.

Corksy | Full-stack developer & project lead

Selected engagement

Full-stack development, project management and project leadership for Corksy, a winery commerce platform spanning eCommerce, point of sale, wine clubs, CRM and reporting. Connecting engineering delivery with product and business needs.

Mereb Technologies | Full-stack developer

Started March 2022 | Addis Ababa, Ethiopia

Maintained and extended a poker game used by a casino business in Las Vegas. Responsibilities included full-stack development, AWS infrastructure management, deployment, performance optimization and new features.

Qmem Developers | Co-founder & full-stack developer

Work recorded from January 2018 | Addis Ababa, Ethiopia

Co-founded Qmem Developers and contributed to web interfaces, full-stack development and product delivery. Built client-facing software across design, frontend and backend concerns.

APPROACH

Start with the user and the business problem. Design a clear experience, build the supporting systems, and carry the work through deployment and iteration. I enjoy making complex workflows easier to use and helping teams turn ideas into deliverable products.

EDUCATION

BSc in Software Engineering | 2018-2023
Addis Ababa University, Addis Ababa Institute of Technology (AAIT)

SELECTED WORK / TECHNICAL RANGE

From interfaces to infrastructure.

Full-stack delivery across business platforms, automation and connected experiences. Explore the portfolio for deeper project stories and published contract details.

SELECTED PROJECT DELIVERY

Cloud delivery & Go backend engineering

March - December 2024 | Independent contracts

17-19 March: Dockerized a Next.js project, set up a CI/CD pipeline and deployed it on AWS EC2. **16 April-11 December:** Go backend development engagement.

Real-time driver assignment | Performance engineering

27 November - 8 December 2024 | Independent contract

Worked on latency in a driver-assignment system using React, Node.js, Express, Azure and Docker, combining full-stack development with performance-focused investigation.

Shuk-Shukta Blogs | Full-stack development

Started October 2022

Built the frontend, backend APIs and database of an end-to-end blogging platform, including search engine optimization. Explore the source code.

Studio Stunnit & Angel's Touch AFH | Business websites

June-July 2023 / September-October 2022

Studio Stunnit: Designed, developed and deployed an interactive website for an interior design studio in Hyderabad, India. **Angel's Touch AFH:** WordPress development for an adult family home in Washington, USA.

Platforms, automation & shared delivery

Additional selected engagements

Full-stack development and design for a parking management system; full-stack work for a ride-hailing platform; social media automation platform development; game-engine automation and optimization with technical and project leadership.

Vue.js, Nuxt.js and Tailwind CSS frontend work for HaHuJobs Primary and Foundo. Shared project contributions also span web, mobile and business applications; project-specific roles and published dates are available in the portfolio catalogue.

TECHNICAL TOOLKIT

Interfaces: JavaScript, TypeScript, React, Next.js, Vue.js, Nuxt.js, Tailwind CSS, Bootstrap, WordPress, Figma and UI/UX design.

Systems & data: Go, Node.js, Express, Python, REST APIs, MongoDB, Mongoose and MySQL. **Delivery:** AWS, Azure, Docker, CI/CD, Git and GitHub.

LET'S BUILD SOMETHING USEFUL
